

## Project Profile

**Location:** Saskatoon, SK, Canada **Building Series/Size:** A-Series 55' w x 64' l **Application:** Warehousing

# CORE RENTAL SERVICES

**NORSEMAN STRUCTURES - STORAGE SOLUTIONS FOR EVERY NEED**

---

Core Rental Services is a construction equipment rental company located in Saskatoon, Saskatchewan. They buy, sell, rent and service construction equipment – mainly high reach equipment such as man lifts and extended forklifts. They also rent and service a lot of roller compaction and heating units in the winter months.

---

**High light transmission eliminates the need for artificial lighting during the day.**

---

In an interview with Mr. Thevenot, co-owner of Core Rental Services, he stated, "We got this Norseman Structures building because we needed more indoor storage for some of our more sensitive parts that we don't want to leave outside."

He went on to say that one of the benefits of a Norseman Structures building over a traditional pole building was that they did not need to run electrical into the building. This is due to the high light transmission fabric used, which allows sunlight to filter through the fabric, eliminating the need for artificial lighting during the day.

Core Rental Services also appreciates that in a location where there is a lot of wind and snow in winter, they have had no issues with snow staying on the building, and the doors have been problem free.

Mr. Thevenot's final words in this interview were, "It has been fantastic. I'm very happy with our choice."
