

Project Profile

Location: Gladstone, Queensland, Australia **Building Size/Series:** (6) TC-Series 100' w x 210' l, (1) T-Series 70' w x 160' l, (7) QL-Series 40' w x 80' l, (3) QL-Series 40' w x 40' l **Application:** Warehousing and Workshops

BECHTEL

17 Buildings For Workshops And Warehousing

Norseman Structures has completed construction of 17 buildings for Bechtel in Australia. Buildings were purchased for a variety of applications including warehouses and workshops and Norseman and Bechtel are currently in discussions on future building projects.

This multi-building project began when GMA Cover Australia Pty Ltd (GMACA), a Norseman Structures distributor in Australia, won contracts with Bechtel Australia to supply warehouses and workshops for Bechtel's LNG (liquefied natural gas) project located at Gladstone, Queensland, Australia.

The LNG multi-billion dollar project, which is owned by BG Group and Queensland Gas Company, draws on extensive coal seam gas reserves, treats and then sends via a 540 km pipeline to Gladstone for conversion to LNG and shipped to markets overseas. The project will produce 8.5 million of LNG per year.
